

Tullochgorum farm

Green manures

What we have used in the past

- Double cut red clover
- Rye grass
- Buckwheat
- Hairy vetch

The Methods used to seed the crop

We started with a simple electric broadcast seeder mounted on an ATV that would cover a width of 20 feet.

how we use our seeders the ATV in fall rye

We also mounted it on our old cultivator

**Seeding during last pass of the
cultivator**

Last chance in corn

We then purchased an air seeder that we mounted on a tine weeder

And we also mount it on our cultivator and seed during the last pass in the corn

The tine weeder in wheat seeding clover

Our target seeding rates

Crop	Lbs/ac	Kg/ha
Red clover	15 to 20	16 to22
Rye grass	15 to 20	16 to 22
Buckwheat	50 to 60	56 to67
Hairy vetch	15 to 20	16 to22

Some of the results

Rye grass in corn

At harvest time

A few weeks after harvest

Red clover in standing corn

Red clover after cereals

Hairy vetch after fall rye

Cross section of vegetation

Tracks after manure spreading

Using Terra Disc to work in clover late spring

First step in preparing for alfalfa hay

After corn the previous year
